The first part presents an overview of educational psychology, and discusses how different approaches to psychology have influenced language teaching methodology.

本书由剑桥大学出版社授权外语教学与研究出版社出版。

To date, the majority of work in language learning psychology has focused on the learner. In contrast, relatively little attention has been paid to teacher psychology. This volume seeks to redress the imbalance by bringing together various strands of research into the psychology of language teachers. It consists of 19 contributions on well-established areas of teacher psychology, as well as areas that have only recently begun to be explored. This original collection, which covers a multitude of theoretical and methodological perspectives, makes a significant contribution to the emerging field of language teacher psychology as a domain of inquiry within language education.

This book explores key areas of educational and social psychology and considers their relevance to language learning and teaching, using activities and questions for reflection. The topics discussed in the book include: • learners' and teachers' beliefs about how a language should be learned and taught • learning and working in groups • relationships with others • the role of the self in teaching and learning • motivation to start and persist with tasks • the role of emotions in learning. The authors provide useful insights for the understanding of language learning and discuss the important implications for language teaching pedagogy. Extra resources are available on the website: www.oup.com/elt/teacher/exploringpsychology Marion Williams was formerly Reader in Applied Linguistics at the University of Exeter and is a past president of IATEFL. Sarah Mercer is Professor of Foreign Language Teaching at the University of Graz, Austria. Stephen Ryan is Professor in the School of Economics at Senshu University, Tokyo.

The scope and purpose of educational processes have been heavily modified under the influence of psychological breakthroughs and their developmental perspectives in recent decades. This book is an attempt to address some of the key psychological aspects in the literature classified into emotional, cognitive, and psychological perspectives with a particular concentration on language teaching. By presenting detailed empirical studies on the covered topics, I attempted to indicate the intertwined relationships between language and psychology in educational settings. The first study deals with the impact of teacher-directed hypnotic suggestions on students' emotional intelligence and their academic performance. The second study introduces simplified tests to coordinate the helpless attitudes of the students. In the last research, I examined the interaction effects of the contextual factors and teachers' professional profiles on their cognitive orientations with a specific focus on teachers' dissonance belief systems. Overall, this book provides an overview of the functions and influences of the psychological concepts in educational contexts, particularly language teaching.

This edited volume brings together both established and emerging researcher voices from around the world to illustrate how complexity perspectives might contribute to new ways of researching and understanding the psychology of language learners and teachers in situated educational contexts. Chapter authors discuss their own perspectives on researching within a complexity paradigm, exemplified by concrete and original examples from their research histories. Moreover, chapters explore research approaches to a variety of learner and teacher psychological foci of interest in SLA. Examples include: anxiety, classroom group dynamics and group-level motivation, cognition and metacognition, emotions and emotion regulation strategies, learner reticence and silence, motivation, self-concept and willingness to communicate.

This edited volume brings together large-scale research as well as case studies from a range of geographical contexts and represents a variety of educational settings involving second language learners and users. Its aim is to explore the interrelated issues of psychology and technology use in second language learning settings as well as in more autonomous environments. As language learning professionals continue to devote more time and attention to making various technological tools an integral part of the classroom, it is just as important to understand the influences that these tools have on the psychological state of the learners who use them. In consideration of this objective, the volume examines factors such as learner attitudes and motivation, emotion and behaviour, and the cognitive processes that are at play in the minds of the language users. This volume will be of interest not only to language teachers but also to researchers working in second language acquisition (SLA), applied linguistics, and educational psychology.

This book examines language teacher efficacy beliefs, focusing on the individual and collective beliefs of Japanese high school teachers. It discusses personal and collective dimensions of language teacher efficacy related to personal second language (L2) capability, instructional L2 efficacy and collective capability towards collaboration. The book provides a detailed discussion about the ways in which these beliefs develop and situates the findings within the wider field of teacher efficacy research. It helps further understanding of factors that may influence teacher self-efficacy and suggests new directions for research to explore in future studies. It will appeal to postgraduates and researchers with an interest in language teacher cognition, the psychology of language teaching and those in the wider fields of self-efficacy, teacher efficacy and teacher agency. It is also of use to those with an interest in the high school English education system in Japan, as well as researchers investigating similar contexts.

This book explores the topic of teacher cognition, making use of sociocultural theory as a framework to understand what teachers know, think, believe and do in their professional contexts through 'applied' conversation analysis. The author examines what teaching and learning mean to teachers by analyzing the interactional work they do with their students, considering when and why teachers make interactive decisions as well as how they utilize new technological tools to address their pedagogical objectives. After discussing how teachers construct identities and display emotions in the classroom, she presents suggestions for language teacher education and development, pedagogy improvement and teacher knowledge. This book will be of interest to language teachers and teacher trainers, as well as students and scholars of applied linguistics and sociocultural theory.

This book brings together a diverse range of empirical chapters spanning various contexts and educational levels which explore the psychology of teaching and learning a subject through a second or other language. The chapters discuss both the psychological stressors and strains for learners and teachers, as well as the benefits and joys of being involved in such programmes. The studies encompass a range of areas, such as Content and Language Integrated Learning (CLIL), Foreign Language Medium of Instruction (FMI), bilingual education and other related approaches to integrating content and language. They feature a variety of psychological constructs, including identity, self-confidence, motivation, self-concept, teacher and learner beliefs, affect, anxiety, stress, mindsets, attributions and well-being, from the perspectives of both teachers and learners. This book is essential reading for anyone interested in ensuring that teachers and students are properly supported and that their experiences of integrated content and language settings enable them to flourish.

How can ideas and concepts from psychology be applied smartly to the classroom to meet the needs of different learners? Supported by research and an awareness of the factors underpinning high-quality teaching, this book encourages teachers, and those training to teach, to examine their own methods in order to develop as confident, evidence-informed professionals. This third edition includes:

- A new chapter on the psychology of elearning
- A new discussion of applied cognitive theories in the classroom
- The use of internationally friendly terminology throughout the book
- Some streamlining of content to offer a more cohesive reading experience
