Are you sick of outrageous beauty claims and over-priced products that don't deliver? Tired of not knowing what to believe about products? Confused about who to trust for beauty tips and tricks? Well, worry no more. The popular science bloggers, The Beauty Brains, are back with another book full of informative and fun beauty advice. "It's Ok to Have Lead in Your Lipstick" starts by debunking what the American Council on Science and Health called the number one unfounded health scare story of 2007. And that's just the beginning: this book answers dozens of important (and some oddball) beauty questions that you're dying to know. Here's what else you'll learn... Clever lies that the beauty companies tell you. The straight scoop of which beauty myths are true and which are just urban legends. Which ingredients are really scary and which ones are just scaremongering by the media to incite an irrational fear of chemicals. How to tell the difference between the products that are really green and the ones that are just trying to get more of your hard earned money by labeling them "natural" or "organic." Written in a straight talk, fact based style yet laced with plenty of humor, "It's Okay to Have Lead in Your Lipstick" is an easy and informative read for all ages.

Covers questions on such topics as salon products versus store products, what hypoallergenic actually means and the pros and cons of organic products. By the co-author of Beginning Cosmetic Chemistry. Reprint.

Practical Knowledge for the Cosmetic Industry, Every chapter updated, 21 new chapters During the past ten years, thousands of new chemical raw materials and formulations have been developed, countless new marketing concepts have been tested and hundreds, if not thousands, of new cosmetic regulations have been enacted. With the third edition of this best-selling chemistry textbook, the authors substantially update all the original material and include 21 additional chapters of brand new material to cover recent developments in the field of cosmetic science. Authors Randy Schueller and Perry Romanowski re-emphasize the importance of providing introductory technical information to those who would like to improve their understanding of cosmetic science. The four major sections of this book cover all important aspects of the cosmetic industry, including: Orientation, Tools and Terms Product Development Cosmetic Ingredients and Vehicles Product Testing

The information resource for personal care professionals.
