Now RGPV introduced new schemes for those students who are studying in the 3rd year 5th sem of RGPV and their affiliated institutes. In this post we are going to share RGPV CBGS 5th sem syllabus for Fire Technology & Safety Engineering branch students. Please read it very carefully and also share RGPV CBGS 5th sem FTE subject list .

This work features presentations by international experts on mine environment and ventilation. Topics covered include analysis and design of ventilation systems, coal bed methane and gas modelling, dust generation and control, and heat flow, fan and face ventilation.

Arranged in four sections, provides review exercises and past examination questions for topics in microeconomics, macroeconomics, interantional economics, and development economics.

ENERGY CONSERVATION AND MANAGEMENT discusses in detail the global energy scenario. The thermodynamic analysis of energy has been explained. Principles of energy conservation and management have been discussed along with the methodology and the Economics of energy has been elaborated with concepts like life cycle costing and rate of return. Procedure and methodology of energy audits has been covered in greater detail. Also included in the book are the recent developments such as the total energy concepts and integrated energy systems. Topics such as energy storage, co-generation, waste heat recovery which are important to improve energy efficiency have been discussed in detail with case studies and examples. The challenges faced in conserving energy sources like steam and electricity have been elaborated along with the improvements in the lighting sector.

New edition of a text intended primarily for the undergraduate courses on the subject which are frequently found in electrical engineering curricula--but the concepts and techniques it covers are also of fundamental importance in other engineering disciplines. The book is structured to develop in parallel the methods of analysis for continuous-time and discrete-time signals and systems, thus allowing exploration of their similarities and differences. Discussion of applications is emphasized, and numerous worked examples are included. Annotation copyrighted by Book News, Inc., Portland, OR

Potential of Nanotechnology is immense and encompasses virtually every field of life. Technologists and researchers all across the globe have realized

this and call it the Technology of the Future. The book is intended to develop interest amongst students of all branches of Engineering and incumbent researchers so that they get to know fundamentals of the subject. The books deals with all the aspects of nanotechnology and its fundamentals and applications, i.e. Nanotechnology, tools and techniques, nanomaterials, nanocomputers, nanocomposites, risks related with the use of nanotechnology and its relation with the environment. Applications of nanotechnology in textiles, solar power, electronics, space explorations and in communication find a reasonable place in the book.

Written with undergraduates and graduates in mind, this volume provides a thorough introduction to the economic, social, environmental and policy issues raised by current systems of energy use. The authors also describe the key physical and engineering features of these energy production systems.

Today, acquiring English language skills has become so essential, especially for those who are looking for new jobs in reputed organizations as well as for the practising professionals. Many engineering students, even though they have adequate knowledge of their subject, are unable to express themselves well in English. Taking this into account, engineering colleges/institutes have introduced exclusive English Language Laboratories where students are drilled in the practical aspects of the English language. This compact and comprehensive book is a step-by-step practical guide to students, telling them how to prepare technical reports and how to acquire the basic communication skills—listening, speaking, reading and writing. The book deals with conversation, situational dialogues and role plays, and Group Discussions (GDs). It also gives detailed discussion about Interviews—step-by-step preparation, practical and psychological preparation, the dos and don'ts for interview—besides dealing with different kinds of interviews: telephonic, videoconferencing, and others. In addition, the text stresses the importance of researching the organization, and salary negotiations. Finally, the book shows the students how to make powerpoint presentations (PPTs), the structure of presentation and using audio visuals. This activity based, skill-oriented, learner centred book is designed according to the WBUT syllabus on Technical Report Writing and Language Laboratory Practice for the B.Tech. students. However, it would be equally useful for B.Tech./B.E. students across the country. **DISTINGUISHING FEATURES :** A practical and student friendly text, the stress being on the functional aspects of the language and various activities for acquiring the language. Gives the Methodology of conducting activities such as GDs, Interviews and Presentation. Provides model GD topics and the step-by-step process of making PPTs. Clearly spells out all the details, right from preparing a good job application, researching the company (including its financial health), to preparing the job portfolio, to wearing the proper dress, handling questions, and negotiating salary. Provides an extensive list of probable questions along with their answers to prepare students for mock interviews. Also gives well-crafted questions at the end of each lesson.
