Hardbound. As its title suggests, this book is intended to give exhaustive information on virus infections and diseases occurring in ruminants. Each virus and corresponding disease is described in a separate chapter, and the chapters are ordered according to current virus classification. Contributing authors are experts on the virus and disease they describe. Where necessary, the text is accompanied by tables and pictures. The accent is placed on diagnosis of the disease by clinical observations including epizootological data. There is also a description of the laboratory procedures of diagnostic virology, and suggestions concerning control measures (e.g. vaccination and/or eradication policy). This book should prove indispensable to: the practising veterinarian, by facilitating recognition of a viral disease, and giving advice on collecting appropriate specimens for laboratory investigation; the veterinary virologist by aiding the choice of appropriate

the need for evidence-based practices in mental health services is becoming clearer by the day and, until recently, the trend of emphasizing services with supporting empirical evidence has been almost exclusively limited to a focus on treatment options. A Guide to Assessments That Work fills a void in the professional literature by addressing the critical role that assessment plays in providing evidence-based mental health services. To optimize its usefulness to readers, this volume addresses the assessment of the most commonly encountered disorders or conditions among children, adolescents, adults, older adults, and couples. Strategies and instruments for assessing mood disorders, anxiety disorders, couple distress and sexual problems, health-related problems, and many other conditions are also covered in depth. With a focus throughout on assessment instruments that are feasible, psychometrically sound, and useful for typical clinical requirements, a rating system has been designed to provide evaluations of a measure's norms, reliability, validity, and clinical utility. Standardized tables summarize this information in each chapter, providing essential information on the most scientifically sound tools available for a range of assessment needs. Using the tools provided in A Guide to Assessments That Work, readers can at a glance determine the possible suitability and value of each instrument for their own clinical purposes. This much needed resource equips readers with the knowledge necessary for conducting the best evidence-based mental health assessments currently possible.

Here, both therapist and client will learn the causes of depression, how to recognize and diagnose the different iterations of depression, the wide variety of psychotherapeutic and psychopharmacological treatment options available, and how to get the most out of those treatments. Zetin, Hoepner, and Kurth explain the causes of depression, how to recognize and diagnose the different iterations of depression, and the wide variety of psychotherapeutic and psychopharmacological treatment options available. Even more important, they show patients how to best work with their clinicians and clinicians how to best help their patients. The book is liberally sprinkled with case discussions, which demystify the treatment protocols and show the various ways that clients respond to treatment. In this book, medical professionals have a go-to desk reference for their questions about depression, and consumers have a friendly, accessible introduction to an otherwise intimidating disorder.

The SAGE Handbook of Environmental Change is an extensive survey of the interdisciplinary science of environmental change, including recent debates on climate change and the full range of other natural and anthropogenic changes affecting the Earth-ocean-atmosphere system in the past, present and future. It examines the historic importance, present status and future prospects of the field over two volumes. With more than 40 chapters, the books situate the defining characteristics and key paradigms within a state-of-the-art review of the field, including its changing nature and diversity of approaches, evidence base, key theoretical arguments, resonances with other disciplines and relationships between theory, research and practice. Opening with a detailed, contextualizing essay by the editors, the work is arranged into six parts: Part One: Approaches to Understanding Environmental Change Part Two: Evidence of Environmental Change and the Geo-ecological Response Part Three: Causes, Mechanisms and Dynamics of Environmental Change Part Four: Key Issues of Human-induced Environmental Changes and Their Impacts Part Five: Patterns, Processes and Impacts of Environmental Change at the Regional Scale Part Six: Responses of People to Environmental Change and Implications for Society Global In its coverage, scientific and theoretical in its approach, the books bring together an international set of respected editors and contributors to provide an exciting, timely addition to the literature on climate change. With the subjects' interdisciplinary framework, this book will appeal to academics, researchers, postgraduates and practitioners in a variety of disciplines including, geography, geology, ecology, environmental science, archaeology, anthropology, politics and sociology.

The Balance of Payments and International Investment Position Compilation Guide is a companion document to the sixth edition of the Balance of Payments and International Investment Position Manual (BPM6) published in 2009. The purpose of the Guide is to show how the conceptual framework described in the BPM6 may be implemented in practice. The Guide is not intended to be a " stand-alone " manual; users of the Guide should be familiar with the BPM6.

Rifts and passive margins are extremely important for the petroleum industry, as they are areas of high sedimentation and can contain significant oil and gas resources. This book provides a comprehensive understanding of rifts and passive margins as a whole. It synthesises in one volume the existing information devoted to specific aspects of these vitally important hydrocarbon habitats. This collection of state-of-the-art information on the topic facilitates the better use of this knowledge to assess the risks of exploring and operating in these settings and the development of systematic and predictive hydrocarbon screening tools. The book will be invaluable for a broad range of readers, from advanced geology students and researchers to exploration managers exploring for and developing hydrocarbon resources in analogous settings.

Published by the American Geophysical Union as part of the Geodynamics Series, Volume 8. During the past decade of the International Geodynamics Program many publications dealing with specific rift areas of the Earth's surface have appeared. Most of them followed symposia that were held in the respective rift zones. Among the rifts thus treated are the Rhinegraben, Afar, Iceland, the Baikal rift, the Oslo paleorift, the Rio Grande rift and the Dead Sea rift. Furthermore, publications dealing with studies of the ocean floor have discussed many oceanic rift areas.
