Eleven-year-old Isabella ' s blended family is more divided than ever in this " timely but genuine " (Publishers Weekly) story about divorce and racial identity from the award-winning and New York Times bestselling author of Out of My Mind, Sharon M. Draper. Eleven-year-old Isabella ' s parents are divorced, so she has to switch lives every week: One week she ' s Isabella with her dad, his girlfriend Anastasia, and her son Darren living in a fancy house where they are one of the only black families in the neighborhood. The next week she ' s Izzy with her mom and her boyfriend John-Mark in a small, not-so-fancy house that she loves. Because of this, Isabella has always felt pulled between two worlds. And now that her parents are divorced, it seems their fights are even worse, and they ' re always about HER. Isabella feels completely stuck in the middle, split and divided between them more than ever. And she is beginning to realize that being split between Mom and Dad involves more than switching houses, switching nicknames, switching backpacks: it ' s also about switching identities. Her dad is black, her mom is white, and strangers are always commenting: " You ' re so exotic! " " You look so unusual. " " But what are you really? " She knows what they ' re really saying: " You don ' t look like your parents. " " You ' re different. " " What race are you really? " And when her parents, who both get engaged at the same time, get in their biggest fight ever, Isabella doesn ' t just feel divided, she feels ripped in two. What does it mean to be half white or half black? To belong to half mom and half dad? And if you ' re only seen as half of this and half of that, how can you ever feel whole? It seems like nothing can bring Isabella ' s family together again—until the worst thing happens. Isabella and Darren are stopped by the police. A cell phone is mistaken for a gun. And shots are fired.

Because police are the most visible face of government power for most citizens, they are expected to deal effectively with crime and disorder and to be impartial. Producing justice through the fair, and restrained use of their authority. The standards by which the public judges police success have become more exacting and challenging. Fairness and Effectiveness in Policing explores police work in the new century. It replaces myths with research findings and provides recommendations for updated policy and practices to guide it. The book provides answers to the most basic questions: What do police do? It reviews how police work is organized, explores the expanding responsibilities of police, examines the increasing diversity among police employees, and discusses the complex interactions between officers and citizens. It also addresses such topics as community policing, use of force, racial profiling, and evaluates the success of common police techniques, such as focusing on crime ' s hot spots. ' It goes on to look at the issue of legitimacy ' how the public gets information about police work, and how police are viewed by different groups, and how police can gain community trust. Fairness and Effectiveness in Policing will be important to anyone concerned about police work: policy makers, administrators, educators, police supervisors and officers, journalists, and interested citizens.

This book is made up of four parts, each dealing with a specific topic: document contents and presentation (text, tables, charts, objects, styles and templates), long documents (sections, notes, bookmarks, outlines, tables of contents, indexes, master documents), bulk mail tools (forms, mail merge) and various advanced functions (macros, customising the interface, group work and document protection, Web and frames pages, and using XML in Word). Each chapter is independent of the others, so that you can choose what to study, and in what order. At the end of the book, you will find the official list of topics tested in the Microsoft Office Specialist Word 2003 Expert exam. The number of the corresponding lesson and exercise is given next to each topic in the list.

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

Considered by many to be mentally retarded, a brilliant, impatient fifth-grader with cerebral palsy discovers a technological device that will allow her to speak for the first time.

There has been an exponential increase in desalination capacity both globally and nationally since 1960, fueled in part by growing concern for local water scarcity and made possible to a great extent by a major federal investment for desalination research and development. Traditional sources of supply are increasingly expensive, unavailable, or controversial, but desalination technology offers the potential to substantially reduce water scarcity by converting the almost inexhaustible supply of seawater and the apparently vast quantities of brackish groundwater into new sources of freshwater. Desalination assesses the state of the art in relevant desalination technologies, and factors such as cost and implementation challenges. It also describes reasonable long-term goals for advancing desalination technology, posits recommendations for action and research, estimates the funding necessary to support the proposed research agenda, and identifies appropriate roles for governmental and nongovernmental entities.
