The first notable feature of this book is its innovation:

Computational intelligence (CI), a fast evolving area, is currently attracting lots of researchers' attention in dealing with many complex problems. At present, there are quite a lot competing books

Nevertheless, the present book is markedly different from the existing books in that it presents new paradigms of CI that have rarely mentioned before, as opposed to the traditional CI techniques or methodologies employed in other books. During the past

Unfortunately, they spread in a number of unrelated publishing directions which may hamper the use of such published resources.

These provide us with motivation to analyze the existing research for categorizing and synthesizing it in a

The second feature of this book is its comprehensiveness:
