Ceramics are a versatile material, more so than is widely known. They are thermal resistant, poor electrical conductors, insulators against nuclear radiation, and not easily damaged, making ceramics a key component in many industrial processes. MAX Phases and Ultra-High Temperature Ceramics for Extreme Environments investigates a new class of ultra-durable ceramic materials, which exhibit characteristics of both ceramics and metals. Readers will explore recent advances in the manufacturing of ceramic materials that improve their durability and other physical properties, enhancing their overall usability and cost-effectiveness. This book will be of primary use to researchers, academics, and practitioners in chemical, mechanical, and electrical engineering. This book is part of the Research Essentials collection.

It is Bombay in 1971, the year India went to war over what was to become Bangladesh. A hard-working bank clerk, Gustad Noble is a devoted family man who gradually sees his modest life unravelling. His young daughter falls ill; his promising son defies his father's ambitions for him. He is the one reasonable voice amidst the ongoing dramas of his neighbours. One day, he receives a letter from an old friend, asking him to help in what at first seems like an heroic mission. But he soon finds himself unwittingly drawn into a dangerous network of deception. Compassionate, and rich in details of character and place, this unforgettable novel charts the journey of a moral heart in a turbulent world of change.
