The Globalisation of Modern Architecture: The Impact of Politics, Economics and Social Change on Architecture and Urban Design Since 1990 Hardcover – Unabridged, 1 July 2012 by Robert Adam (Author)

The Globalisation of Modern Architecture: The Impact of ...

Robert Adam's *The Globalisation of Modern Architecture* takes a compelling and broad-ranging look at the output of the architectural world, writes James Pallister. It may seem an unlikely choice of subject for an architect known for being a practitioner of – say it sotto voce – ‘traditional architecture’, but Robert Adam has completed an impressively comprehensive and compelling survey of contemporary social and political theory.

The Globalisation of Modern Architecture by Robert Adam

The Globalisation of Modern Architecture: the Impact of Politics, Economics and Social Change on Architecture and Urban Design Since 1990 Paperback – Unabridged, 1 Jun. 2013 by Robert Adam (Author)

The Globalisation of Modern Architecture: the Impact of ...

Part sociological theory, part political and economic history, *The Globalisation of Modern Architecture* by Professor Robert Adam explains how Western or North Atlantic Modernist architecture came to dominate world cities and commercial architecture in the late 20th and 21st century. It is a scholarly book in which Robert Adam steps aside from his own architectural preferences, and takes a broad and impartial look at the development and consequences of this global phenomenon which impacts on ...

The Globalisation of Modern Architecture Book - e-architect

Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990.

Read Online The Globalisation Of Modern Architecture The Impact Of

The globalisation of modern architecture: the impact of politics, economics and social change on architecture and urban design since 1900. The ideas behind globalisation have been developing since the dawn of the modern man, contrary to the notions that globalisation is often considered a fairly new development of the 20th century.

Globalisation of Modern Architecture - Austin Powers ...

Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990. Based on the principle that design unavoidably follows social change, politics and economics, this analysis casts a new light on recent architecture.

The Globalisation of Modern Architecture: The Impact of ...

Book Description. Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990. Based on the principle that design unavoidably follows social change, politics and economics, this analysis casts a new light on recent architecture.

The Globalisation of Modern Architecture

The book is a wonderful and accurate commentary of how and why economics and politics over the past 20 years have shaped the globalization of modern architecture in major cities and what the future could bring.

The Globalisation of Modern Architecture: the Impact of ...

'By the final decades of the 19thC... the world entered its first modern global era.' pg 16 John Maynard Keynes describes the peak of globalisation to be where a man can sit in his bedroom drinking a cup of coffee ordering things from across the world and expect them to turn up at his door with ease.

The Globalisation of Modern Architecture: The Impact of ...

Modern architecture progressed with faith in reason. It introduced the concept of internationalization in architecture, whereby designs of offices, schools, hospitals and housing have been based on multifunction. This style, however, has been fast replaced by postmodernism in which concepts are set on universally accepted ideologies.

Taking the break-up of the Soviet Union and the entry of Russia, China and India into the global market as the start of a new era of globalisation, Robert Adam compares new developments in architecture and urban design with major shifts in the balance of power since 1990. Based on the principle that design unavoidably follows social change, politics and economics, this analysis casts a new light on recent architecture. Starting with the lead up to events in the 1990s, links are established between the global dominance of the North Atlantic economies, architectural style and a dramatic increase in international architectural practice. The widely-observed homogeneity of the global consumer economy is examined in relation to branding, tourism and international competition between cities, and parallels are drawn with universal architectural and urban types, iconic architecture and the rise of the star architect. Contrasting pressures to maintain differences are identified in the break-up of nation states, identity politics, targeted marketing and environmentalism, and these are related to attempts to reinforce local identity through architecture and urban design. Using social, political and economic change as a guide to new directions in architecture and urban design, the book ends by tracing the changes in global power revealed by the 2008 Western financial crash and its immediate impact on the built environment. By comparing past patterns of cultural influence, the book speculates on how architecture and urban design may come to reflect wider global trends.

For centuries, across nations, dialogue between the domestic and the foreign has affected and transformed architecture. Today these dialogues have become highly intensified. "The Domestic and the Foreign in Architecture" examines how these exchanges manifest themselves in contemporary architecture, in terms of its aesthetic potential and its practice, which, in turn, are impacted by broad economic, cultural and political issues. This book traces how diverse cultural encounters inevitably modify conventional categories, standards and codes of architecture, such as domestic identity, its political and economic representations and the negotiations with what is deemed foreign. Theoretical reflections by distinguished scholars are accompanied by interviews with some of the most influential architects practicing today, as well as stunning visual presentations by professional photographers.

This major work provides the first comprehensive history of one of modernism's most defining and controversial architectural legacies: the 20th-century drive to provide 'homes for the people'. Vast programmes of mass housing – high-rise, low-rise, state-funded, and built in the modernist style – became a truly global phenomenon, leaving a legacy which has suffered waves of disillusionment in the West but which is now seeing a dramatic, 21st-century renaissance in the booming, crowded cities of East Asia. Providing a global approach to the history of Modernist mass-housing production, this authoritative study combines architectural history with the broader social, political, cultural aspects of mass housing – particularly the 'mass' politics of power and state-building throughout the 20th century. Exploring the relationship between built form, ideology, and political intervention, it shows how mass housing not only reflected the transnational ideals of the Modernist project, but also became a central legitimizing pillar of nation-states worldwide. In a compelling narrative which likens the spread of mass housing to a 'Hundred Years War' of successive campaigns and retreats, it traces the history around the globe from Europe via the USA, Soviet Union and a network of international outposts, to its ultimate, optimistic resurgence in China and the East – where it asks: Are we facing a new dawn for mass housing, or another 'great housing failure' in the making?

This book provides a clear-sighted analysis which suggests that architectural design may yet shape and order the future of cities. A clear argument that emerges is that to retain their future agency, architects must understand the contours and ecologies of practice that constitute the global system of

architectural production.

The Architecture of Neoliberalism pursues an uncompromising critique of the neoliberal turn in contemporary architecture. This book reveals how a self-styled parametric and post-critical architecture serves mechanisms of control and compliance while promoting itself, at the same time, as progressive. Spencer's incisive analysis of the architecture and writings of figures such as Zaha Hadid, Patrik Schumacher, Rem Koolhaas, and Greg Lynn shows them to be in thrall to the same notions of liberty as are propounded in neoliberal thought. Analysing architectural projects in the fields of education, consumption and labour, The Architecture of Neoliberalism examines the part played by contemporary architecture in refashioning human subjects into the compliant figures - student-entrepreneurs, citizen-consumers and team-workers - requisite to the universal implementation of a form of existence devoted to market imperatives.

The definitive introductory book on the theory and history of regionalist architecture in the context of globalization, this text addresses issues of identity, community, and sustainability along with a selection of the most outstanding examples of design from all over the world. Alex Tzonis and Liane Lefaivre give a readable, vivid, scholarly account of this major conflict as it relates to the design of the human-made environment. Demystifying the reasons behind how globalization enabled creativity and brought about unprecedented wealth but also produced new wastefulness and ecological destruction, the book also looks at how regionalism has also tended to confine, tearing apart societies and promoting destructive consumerist tourism.

Using time as a unifying theme, this book critically analyses many of the key concepts in modern architecture and urban design, such as modernity, innovation, timelessness and sustainability. Drawing on the statements of contemporary architects and with reference to a wide range of sources from history, philosophy, sociology and anthropology, as well as studies in diverse subjects such as science fiction, colonialism and archaeology, the text provides a new perspective on much of the thinking behind contemporary design. In addition, it develops original and practical theories on the meanings of modernity, the variable ageing of the environment, the central role of longevity in sustainability, the significance of authenticity in conservation, and the relationship between collective memory and tradition.

Transnational Architecture and Urbanism combines urban planning, design, policy, and geography studies to offer place-based and project-oriented insight into relevant case studies of urban transformation in Europe, North America, Asia, and the Middle East. Since the 1990s, increasingly multinational modes of design have arisen, especially concerning prominent buildings and places. Traditional planning and design disciplines have proven to have limited comprehension of, and little grip on, such transformations. Public and scholarly discussions argue that these projects and transformations derive from socioeconomic, political, cultural trends or conditions of globalization. The author suggests that general urban theories are relevant as background, but of limited efficacy when dealing with such context-bound projects and policies. This book critically investigates emerging problematic issues such as the spectacularization of the urban environment, the decontextualization of design practice, and the global circulation of plans and projects. The book portends new conceptualizations, evidence-based explanations, and practical understanding for architects, planners, and policy makers to critically learn from practice, to cope with these transnational issues, and to put better planning in place.

Since its first appearance in 1981, critical regionalism has enjoyed a celebrated worldwide reception. The 1990s increased its pertinence as an architectural theory that defends the cultural identity of a place resisting the homogenising onslaught of globalisation. Today, its main principles (such as acknowledging the climate, history, materials, culture and topography of a specific place) are integrated in architects' education across the globe. But at the same time, the richer cross-cultural history of critical regionalism has been reduced to schematic juxtapositions of 'the global' with 'the local'. Retrieving both the globalising branches and the overlooked cross-cultural roots of critical regionalism, Resisting Postmodern Architecture resituates critical regionalism within the wider framework of debates around postmodern architecture, the diverse contexts from which it emerged, and the cultural media complex that conditioned its reception. In so doing, it explores the intersection of three areas of growing historical and theoretical interest: postmodernism, critical regionalism and globalisation. Based on more than 50 interviews and previously unpublished archival material from six countries, the book transgresses existing barriers to integrate sources in other languages into anglophone architectural scholarship. In so doing, it shows how the 'periphery' was not just a passive recipient, but also an active generator of architectural theory and practice. Stylianos Giamarellos challenges long-held 'central' notions of supposedly 'international' discourses of the recent past, and outlines critical regionalism as an unfinished project apposite for the 21st century on the fronts of architectural theory, history and historiography.
