Political ecology applies a system's perspective to understanding the ecological ramifications and sequelae of political economic inspired practices and policy on both macro- and microenvironments. It looks upstream at the actors and actions responsible for setting environmental changes in motion, and downstream at those subject to such changes.

The International Handbook of Political Ecology

Yet, in spite of the evidence at hand, climate change remains the toughest, most intractable political issue we, as a society, have ever faced. This is not to say that there hasn't been progress.

The challenging politics of climate change

In political ecology, the environment is seen as a force influencing material and political outcomes, but also as a major site of social and political struggle. The governance of climate change involves in the first instance the politics of how the scientific facts of climate change and the policy agenda of response are constructed.

This book provides the first systematic critique of the concept of climate change adaptation within the field of international development. Drawing on a reworked political ecology framework, it argues that climate is not something 'out there' that we adapt to. Instead, it is part of the social and biophysical forces through which our lived environments are actively yet unevenly produced. From this original foundation, the book challenges us to rethink the concepts of climate change, vulnerability, resilience and adaptive capacity in transformed ways. With case studies drawn from Pakistan, India and Mongolia, it demonstrates concretely how climatic change emerges as a dynamic force in the ongoing transformation of contested rural landscapes. In crafting this synthesis, the book recalibrates the frameworks we use to envisage climatic change in the context of contemporary debates over development, livelihoods and poverty. With its unique theoretical contribution and case study material, this book will appeal to researchers and students in environmental studies, sociology, geography, politics and development studies.

Drawing on concepts in political economy, political ecology, justice theory, and critical development studies, the authors offer the first comprehensive, systematic exploration of the ways in which adaptation projects can produce unintended, undesirable results. This work is on the Global Policy: Next Generation list of six key books for understanding the politics of global climate change.

"e:System change not climate change!"e: This cry reverberated throughout the streets of Paris during 2015's heated COP21 climate negotiations. It was as much a demand as it was an indictment of the failure of existing political institutions to respond adequately to our world's ecological crisis. In an era of slow motion apocalypse, with 3,500 international environmental agreements to date, where did everything go wrong? In this new and greatly expanded edition of his 1991 classic Political Ecology, Dimitri Roussopoulos delves into the history of environmentalism to explain the failure of the state management of the ecological crisis. He explores civil society's various past responses and the prospects for channeling environmentalist aspirations into political alternatives, emphasizing the ideas of social ecology and the central role of democratic neighborhoods and cities in developing alternatives. Ecologists, Roussopoulos argues, aim further than simply protecting the environment—they call for new communities, new lifestyles, and a new way of doing politics. This US edition also includes a new preface analyzing the implications of Trump's presidency for climate politics and an extensive new conclusion analyzing the Paris Accord. Revised, expanded, and updated, Political Ecology is a classic that provides an essential, timely history of the environmental movement now when we need it most.

The Political Ecology of Austerity explores the environmental dimension of austerity that has thus far escaped academic, policy, and media attention. Offering a better comprehension of the full socio-environmental impact of austerity measures, the book highlights the importance of considering environmental issues when designing responses to economic crisis in the future. Mobilising detailed case studies from across the world, the volume documents the ways in which austerity impacts global and local ecologies, shapes environmental conflicts and gives rise to new forms and practices of social mobilisation and resistance. Bringing together theoretical debates and rigorous case studies, the book proposes 'the political ecology of austerity' as an appropriate method of analysis that can inform our understanding of the shift in environmental protection policies and the intensification of growth practices (green or otherwise) that followed the 2008 global economic crisis. The Political Ecology of Austerity discloses austerity to be a globalised set of tools not only for budgetary discipline, but also for socio-environmental discipline that justifies the continuation of capital accumulation at the expense of further global environmental degradation. This book will be of great interest to students and scholars of social and political sciences, environmental studies, urban studies, and political ecology.

This textbook introduces political ecology as an interdisciplinary approach to critically examine land and environmental issues. Drawing on discourse and narrative analysis, Marxist political economy and insights from natural science, the book points at similarities, differences and inter-connections between environmental governance in the global North and South. A wide range of carefully curated case studies are presented, with a particular focus on Africa and Norway. Key themes of power, justice and environmental sustainability run through all chapters. The authors challenge established views and leading discourses and present research findings that may surprise readers. Chapters cover topics including wildlife conservation, climate change and conflicts, land grabbing, the effects of population growth on the environment, jihadism in the African Sahel, bioprospecting, feminist political ecology, and struggles around carbon mitigation within a fossil fuel-based economy. This introductory text provides tools and examples for both undergraduate and postgraduate students to better understand on-going struggles about some of the world's most urgent challenges.

This edited volume explores how a feminist political ecology framework can bring fresh insights to the study of rural and urban livelihoods dependent on vulnerable rivers, lakes, watersheds, wetlands and coastal environments. Bringing together political ecologists and feminist scholars from multiple disciplines, the book develops solution-oriented advances to theory, policy and planning to tackle the complexity of these global environmental changes. Using applied research on the contemporary processes of groundwater, springs, rivers, lakes, watersheds and coastal wetlands in Central and South Asia, Northern, Central and Southern Africa, and South and North America, the authors draw on a variety of methodological perspectives and new theoretical approaches to demonstrate the importance of considering multiple layers of social difference as produced by and central to the effective governance and local management of water resources. This unique collection employs a unifying feminist political ecology framework that emphasizes the ways that gender interacts with other social and geographical locations of water resource users. In doing so, the book further questions the normative gender discourses that underlie policies and practices surrounding rural and urban water management and climate change, water pollution, large-scale development and dams, water for crop and livestock production and processing, resource knowledge and expertise, and critical livelihood studies. This book will be of interest to students and scholars of environmental studies, development studies, feminist and environmental geography, anthropology, sociology, environmental philosophy, public policy, planning, media studies, Latin American and other area studies, as well as women's and gender studies.

"The new and greatly expanded edition of the 1991 classic, Political Ecology: the Climate Crisis and a New Social Agenda explains the history of environmental politics and its prospects for the future. Ecological activists, Dimitri Roussopoulos argues, aim for more than protecting the environment: they call for new communities, new lifestyles, and a new way of doing politics. Political Ecology opens by presenting the history of the state management of the environment, then moves to an overview of the great variety of popular responses to the ecological crisis, before finally discussing the main political tendencies offered by the ecology movement. The concluding sections explore prospects for channeling environmentalist aspirations into political alternatives, demonstrating a set of social ecology-inspired successes and insisting on the central role of cities to developing social and ecological alternatives. Finally, a new afterword updates the work for a post-COP21 era by critiquing the limitations of the Paris Accord. This book has been translated into Spanish, Greek, French, German and Turkish."--

The world is caught in the mesh of a series of environmental crises. So far attempts at resolving the deep basis of these have been superficial and disorganized. Global Political Ecology links the political economy of global capitalism with the political ecology of a series of environmental disasters and failed attempts at environmental policies. This critical volume draws together contributions from twenty-five leading intellectuals in the field. It begins with an introductory chapter that introduces the readers to political ecology and summarizes the book's main findings. The following seven sections cover topics on the political ecology of war and the disaster state; fuelling capitalism: energy scarcity and abundance; global governance of health, bodies, and genomics; the contradictions of global food: capital's marginal product: effluents, waste, and garbage; water as a commodity, a human right, and power; the functions and dysfunctions of the global green economy; political ecology of the global climate, and carbon emissions. This book contains accounts of the main currents of thought in each area that bring the topics completely up-to-date. The individual chapters contain a theoretical introduction linking in with the main themes of political ecology, as well as empirical information and case material. Global Political Ecology serves as a valuable reference for students interested in political ecology, environmental justice, and geography.

Urban Political Ecology in the Anthropo-obscene: Interruptions and Possibilities centres on how to organize anew the articulation between emancipatory theory and political activism. Across its theoretical and empirical chapters, written by leading scholars from anthropology, geography, urban studies, and political science, the book explores new political possibilities that are opening up in an age marked by proliferating contestations, sharpening socio-ecological inequalities, and planetary processes of urbanization and environmental change. A deepened conversation between urban environmental studies and political theory is mobilized to chart a radically new direction for the field of urban political ecology and cognate disciplines: What could emancipatory politics be about in our time? What does a return of the political under the aegis of equality and freedom signal today in theory and in practice? How do political movements emerge that could re-invent equality and freedom as actually existing socio-ecological practices? The hope is to contribute discussions that can expand and rearrange critical environmental studies to remain relevant in a time of deepening depoliticization and the rise of post-truth politics. Urban Political Ecology in the Anthropo-obscene will be of interest to postgraduates, established scholars, and upper level undergraduates from any discipline or field with an interest in the interface between the urban, the environment, and the political, including: geography, urban studies, environmental studies, and political science.
