The impacts of the digital transformation on society in general, and particularly on people's lives, are the subject of increasing debate among policymakers, researchers and industry. This book explores the challenges of this new revolution, identifies solutions, and demonstrates how knowledge management can enable the transition process associated with the digital transformation, guided by the principles of sustainability. Featuring contributions by experts from diverse areas of science and business – on topics ranging from the digital transformation of knowledge management in the public sector, to the creation of sustainable smart cities, regions and countries, and from using AI for business models to food security – it provides a comprehensive discourse on the digital transformation's impacts on employment, education, governance, social life, sustainability, values, the economy and democracy.

Analog Electronics for Radiation Detection showcases the latest advances in readout electronics for particle, or radiation, detectors. Featuring chapters written by international experts in their respective fields, this authoritative text: Defines the main design parameters of front-end circuitry developed in microelectronics technologies Explains the basis for the use of complementary metal-oxide semiconductor (CMOS) image sensors for the detection of charged particles and other non-consumer applications Delivers an in-depth review of analog-to-digital converters (ADCs), evaluating the pros and cons of ADCs integrated at the pixel, column, and per-chip levels Describes incremental sigma-delta ADCs, time-to-digital converter (TDC) architectures, and digital pulse-processing techniques complementary to analog processing Examines the fundamental parameters and front-end types associated with silicon photomultipliers used for single visible-light photon detection Discusses pixel sensors with per-pixel TDCs, channel density challenges, and emerging 3D technologies interconnecting detectors and electronics Thus, Analog Electronics for Radiation Detection provides a single source for state-of-the-art information on analog electronics for the readout of radiation detectors.

During the same period in which Derek Walcott was pouring immense physical, emotional, and logistical resources into the foundation of a viable first-rate West Indian theatre company and continuing to write his inimitable poetry, he was also busy writing newspaper reviews, chiefly for the Trinidad Guardian. His prodigious reviewing activity extended far beyond those areas with which one might most readily associate his interests and convictions. As Gordon Rohlehr once presciently observed, "If one wants to see a quotidian workaday Walcott, one should go back to [his] well over five hundred articles, essays and reviews on painting, cinema, calypso, carnival, drama and literature," articles which "reveal a rich, various, witty and scrupulous intelligence in which generous humour counterpoints acerbity." These articles capture the vitality of Caribbean culture and shed additional light on the aesthetic preoccupations expressed in Walcott's essays published in journals. The editors have examined the corpus of Walcott's journalistic activity from its beginnings in 1950 to its peak in the early 1970s, and have made a generous selection of material from the Guardian, along with occasional pieces from such sources as Public Opinion (Kingston) and The Voice of St. Lucia (Castries). The articles in Volume 2 are organized as follows: the performing arts; general surveys of anglophone Caribbean drama, theatre, and society; festivals, theatre companies, and productions; British and American drama; dance and music theatre; Carnival and calypso; and cinema screenings in Trinidad. Volume 2 additionally contains an exhaustive annotated and cross-referenced chronological bibliography of Walcott's journalism up to 1990. The co-editor Christopher Balme has written a searching introductory essay on a central theme – here, a survey of West Indian theatre and Walcott's engagement with it, particularly the idea of a 'National Theatre', coupled with an illustrative discussion of the playwright's seminal dramatic spectacle Drums and Colours.
