The world is on the precipice of energy innovation. As we strive toward cleaner fuels, some technologies will rise and others will fall. Will the Tesla Roadster and the Nissan Leaf go the way of the 1890s' Morrison Electric? The new rock stars of the transportation industry are radical entrepreneurs with visions that may change the landscape of energy as drastically as computers changed the landscape of communication. Electric vehicles (EVs) are steadily gaining acceptance. Countries like Norway, France, India, and China have stated that they will abandon sales and manufacturing of

conventional vehicles by 2025–2030 in favor of EVs. Eberhart’s expert book provides everything we need to know to engage in the debate over EVs versus internal combustion vehicles. He skillfully sorts fact from fiction, puts valuable research at our finger tips, and offers us a glimpse of what the world might look like in 2050 with a potential worldwide population of 9.6 billion people and over 530 million EVs on our roads. The future has never seemed more like science fiction. We’ve seen hydrogen fuel-cell-powered trains (“hydrail”), autonomous drones, the first prototypes and working models of electric jets, and vertical takeoff and landing (VTOL) vehicles. Uber promised to lift intercity EVs to the sky with its Elevate program, and smaller startups have demonstrated ingenious contraptions for human-powered flight. Eberhart envisions a successful energy revolution where we learn from our mistakes and

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped
