Tratado internacional (Convenção Quadro) Atualmente a tendência mundial é pela adoção de medidas legislativas, educativas e econômicas que possam reduzir o consumo e a iniciação. A própria Organização Mundial da Saúde [OMS, da qual o Brasil é signatário, adotou um tratado internacional para o controle do tabaco, a Convenção-Quadro (Framework Convention on Tobacco Control).

On October 14-19, 1990, the 6th International Conference on the Conservation of Earthen Architecture was held in Las Cruces, New Mexico. Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

The dictionary expands on the original idea of Karttunen and Lockhart to map the usage of loans in Nahuatl, by using a much larger and diversified corpus of sources, and by including contextual use, missing in earlier studies. Most importantly, these sources enrich the colonial corpus with modern data [ significantly expanding on our knowledge on language continuity and change.

This volume presents a systematic and comprehensive analysis of the Spanish evidential semi-auxiliaries *parecer* and *resultar*, the modal constructions with *amenazar* and *prometer*, and the modal auxiliaries *poder*, *deber* and *tener que*. These verbs have never been considered together in a global approach that transcends the classical "verbal periphrases" model. The book proposes a cognitive-functional account of evidentiality and modality in Spanish with special attention to subjectivity and grounding. The theoretical reflection relies on empirical evidence of two sorts: synchronic and diachronic corpus-analyses alternate with tests that measure the semantic and pragmatic compatibility of the evidential and epistemic constructions with specific sentences. Following the assumption that linguistic forms are determined by their meaning, the array of constructions that characterizes the different verbs justifies their grouping in three pairs of (semi-)auxiliaries: *parecer* vs *resultar*, *amenazar* vs *prometer* and *poder* vs *deber/tener que*. The distributional differences observed in the corpus are further shown to correlate with different degrees of grammaticalization. Primarily intended for scholars working in the field of Spanish functional linguistics, the monograph is also relevant for grammaticalization studies and for cognitive-semantic research at large. Given its combined theoretical and applied character, the volume is also of interest to anyone concerned with syntactic processes, lexical semantics or the wider area of discourse analysis and pragmatics.

This book documents the important advances that have been achieved in abdominoplasty over the past 15 years, in particular through the introduction of a nontraumatic approach associated with minimal morbidity owing to the avoidance of resection of abdominal panniculus and damage to the perforating vessels. The surgical principles of this procedure, including in combination with liposuction, are fully described by its developer, Juarez Avelar, with the aid of a wealth of color illustrations. A miniabdominoplasty option is also discussed and recent significant technical contributions such as various new plication techniques and means of minimizing complications are clearly presented. In addition, a series of chapters explain how the surgical principles underlying the described nontraumatic method of abdominoplasty can now be applied to other areas of the body, for example to improve rhytidoplasty, ear reconstruction, body contouring, and medial thigh lifting. This book enables the plastic surgeon to apply the latest abdominoplasty techniques effectively and safely.

The significance of food and feasting to Pre-Columbian Mesoamerican cultures has been extensively studied by archaeologists, anthropologists and art historians. Foodways studies have been critical to our understanding of early agriculture, political economies, and the domestication and management of plants and animals. Scholars from diverse fields have explored the symbolic complexity of food and its preparation, as well as the social importance of feasting in contemporary and historical societies. This book unites these disciplinary perspectives [ from the social and biological sciences to art history and epigraphy ] creating a work comprehensive in scope, which reveals our increasing understanding of the various roles of foods and cuisines in Mesoamerican cultures. The volume is organized thematically into three sections. Part 1 gives an overview of food and feasting practices as well as ancient economies in Mesoamerica. Part 2 details ethnographic, epigraphic and isotopic evidence of these practices. Finally, Part 3 presents the metaphoric value of food in Mesoamerican symbolism, ritual, and mythology. The resulting volume provides a thorough, interdisciplinary resource for understanding, food, feasting, and cultural practices in Mesoamerica.
