I like the 3D mode, in which the D3000 magically moves the sensor around on its own to track the subject, if either it or you move. You set this at: MENU > CAMERA > AF area mode > 3D-tracking > OK. Once set, you're all set for shooting anything from sports to still lifes, since the default AF-A mode magically optimizes the D3000 for everything. All you do is pick a sensor for starters and go.

This book is for anyone who upgrades from their point-and-shoot, or for anyone who wants to jump into photography with the control and capabilities of a DSLR but without the high price. There's the manual, of course, as well as competing books, and while they all explain, often in 400+ pages, what the camera can do, none of them shows exactly how to use the camera to create great images! This book has one goal: to teach D3000 owners how to make great shots using their Nikon camera. It teaches how to use the D3000 to create the type of photos that inspired users to buy the camera in the first place. Everything in the book is in service of creating a great image. Starting with the top ten things needed to know about the camera, photographer Jeff Revell then carefully guides readers through the modes of the camera. Users get practical advice from a pro on which settings to use when, great shooting tips, and even end-of-chapter assignments.

This title includes a camera specific 80-minute DVD, created by photographers for photographers, as well as a book packed with picture-taking tips and useful for those who want to get the most from their camera.
