API Design Principle - DZone Integration

A RESTful design improves API performance, reduces development efforts and decreases the necessary operational support through the development of web applications, web services and web APIs. With proven RESTful constraints, teams may create scalable, omnipresent, prolific systems. REST requires a new development mentality, which is why many API implementations are not really based on REST constraints or principles, nor do they fulfil scalability, upgradeability and interoperability expectations.

This volume represents the 19th International Conference on Information Technology - New Generations (ITNG), 2022. ITNG is an annual event focusing on state of the art technologies pertaining to digital information and communications. The applications of advanced information technology to such domains as astronomy, biology, education, geosciences, security, and health care are the among topics of relevance to ITNG. Visionary ideas, theoretical and experimental results, as well as prototypes, designs, and tools that help the information readily flow to the user are of special interest. Machine Learning, Robotics, High Performance Computing, and Innovative Methods of Computing are examples of related topics. The conference features keynote speakers, a best student award, poster award, and service award. . This publication is unique as it captures modern trends in IT with a balance of theoretical and experimental work. Most other work focus either on theoretical or experimental, but not both. Accordingly, we do not know of any competitive literature.
