In 1997, York International recalled the 80 downflow mid-efficiency furnaces with model numbers starting with P2DP, PBKD, and XED02. Faulty gluing of the insulation surrounding the heat exchanger, potentially causing the cabinet wall to fall on the heat exchanger and start a fire led to the recall which covered 21,000 units.

Includes Part 1A: Books, Part 1B: Pamphlets, Serials and Contributions to Periodicals and Part 2: Periodicals. (Part 2: Periodicals incorporates Part 2, Volume 41, 1946, New Series)

This fourth volume contains further ground-breaking and highly relevant work. Taking on the placebo and nocebo phenomenon, pain management and muscles and pain the volume yet again promotes the forward thinking and cutting edge work of the Physiotherapy Pain Association. In Part 1 a number of internationally renowned clinicians and researchers have come together to produce the first published attempt to broadly address and critically appraise the placebo and nocebo phenomenon from a clinical perspective for physiotherapists. The information and the way the material is presented should fascinate as well as challenge readers to think and work differently. Understanding the placebo fully requires a radical shift in thinking about human recovery mechanisms and the way in which treatments can be triggered to work at their most efficient. Part 2 takes on three more pain management topics - the integration of pain management approaches and techniques for individual therapists working with individual patients or in 'out-patient' settings; information giving for patients and addressing the taxing problem of improving fitness in patients with chronic pain related incapacity. The last part is devoted to some major issues surrounding the relationship of muscles to pain. Many current beliefs about the role of muscles come under scrutiny and some are constructively challenged by new proposals. Perhaps the most exciting aspect of the work presented here is that physiotherapy, if it fully integrates the information provided into clinical practice, should be increasingly recognised as the central and essential component of modern management of musculoskeletal pain states. The Topical Issues in Pain series derives from the work, study days and seminars of the Physiotherapy Pain Association and is written by clinicians for clinicians. Each volume reviews the literature and presents best practice in a lively and understandable text. All clinicians will benefit from the straightforward advice.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

The assessment of individual differences has generated shockwaves affecting sociology, education, and a number of other behavioral sciences as well as the fields of management and organizational behavior. In covering the assessment of individual differences, this book pays tribute to the interests and activities that Douglas N. Jackson has incorporated into his career as a psychologist. He continues to be a leader in putting academic findings to practical use. He has also inspired generations of students with his mastery of complex concepts and as a personal example of the ability to balance several simultaneous areas of research. Consistent with the focus of Jackson's research, the theme of this book will be how the use of deductive, construct-driven strategies in the assessment of individual differences leads to benefits in terms of the applicability of the assessment instruments and the clarity of the conclusions that can be drawn from the research.
